Much more than trees 2
Measuring the social and economic impact of The National Forest
Addendum – Updating the deprivation analysis

1.1 Introduction

Following the publication of 'Much more than trees 2' in January 2004, the Office of the Deputy Prime Minister (ODPM) produced 'The English Indices of Deprivation 2004' (ID 2004), updating the Index of Multiple Deprivation 2000 (IMD 2000). Recognising the importance of this new data source, the National Forest Company commissioned the Centre for Economic and Social Regeneration at Staffordshire University to review the new data and compare it with earlier trends. In terms of the previous socio-economic impact analysis completed by the Centre, this Addendum relates to:

Proportion of the population who live in wards that rank within the most deprived 10% and/or 25% wards in the Country (Indicator 11)

1.2 Index of Multiple Deprivation 2000

The IMD 2000 highlighted two wards in the Forest area – Victoria and Waterside in East Staffordshire - within the 10% most deprived in the Country and 13 within the 25% most deprived (Table 1). The additional eleven wards were: Uxbridge, Burton, Broadway, Eton, Winshill and Shobnall in East Staffordshire; Greenhill and Oakthorpe and Donisthorpe in North West Leicestershire; Newhall and Hartshorne in South Derbyshire; and Bagworth in Hinckley and Bosworth.

Table 1: Forest wards within the 10% and 25% most deprived in the Country (IMD 2000)

| No. | Ward | District | IMD Score | Rank out of 8414 wards in England | Population in Forest area (1991 Census) |
|--------------------------|---------------------------|----------------|-----------|-----------------------------------|---|
| 10% most deprived | | | | | |
| 1 | Victoria | East Staffs | 46.07 | 754 | 4316 |
| 2 | Waterside | East Staffs | 44.93 | 821 | 4335 |
| 25% most deprived | | | | | |
| 3 | Uxbridge | East Staffs | 44.42 | 855 | 2644 |
| 4 | Burton | East Staffs | 43.30 | 916 | 1220 |
| 5 | Greenhill | NW Leics | 40.69 | 1076 | 6068 |
| 6 | Broadway | East Staffs | 39.89 | 1128 | 3685 |
| 7 | Eton | East Staffs | 38.50 | 1231 | 3501 |
| 8 | Winshill | East Staffs | 33.53 | 1619 | 6533 |
| 9 | Oakthorpe and Donisthorpe | NW Leics | 32.16 | 1761 | 1983 |
| 10 | Shobnall | East Staffs | 31.43 | 1834 | 4067 |
| 11 | Newhall | South Derbys | 30.60 | 1912 | 6794 |
| 12 | Bagworth | Hinckley & Bos | 30.30 | 1947 | 1648 |
| 13 | Hartshorne | South Derbys | 29.64 | 2030 | 3505 |
| Total | | | | | 50,299 |

NB. Forest population (1991) 191,395

Source: ODPM

The data revealed that in 2000, around 5% of The National Forest's population resided in wards that ranked within the 10% most deprived and 26% within the 25% most deprived wards. The concentration of deprivation in the inner wards of Burton upon Trent and the coalfield communities of South Derbyshire and North West Leicestershire was particularly apparent.

A detailed examination of the domain scores for each ward, focusing on wards which ranked amongst the 2000 most deprived, revealed concentrations of:

- income deprivation – people living on low incomes - in Burton upon Trent and parts of North West Leicestershire District;
- employment deprivation – people who want to work but are unable to do so through unemployment, sickness or disability - in Burton upon Trent and parts of North West Leicestershire and South Derbyshire Districts;
- health deprivation – people whose quality of life is impaired by either poor health or disability - in Burton upon Trent and parts of North West Leicestershire and South Derbyshire Districts;
- education deprivation – adults and children who lack qualifications - in Burton upon Trent and parts of North West Leicestershire, South Derbyshire and Hinckley and Bosworth Districts;
- housing deprivation – people living in unsatisfactory housing, and, in the extreme case, homelessness - in Burton upon Trent and small areas of North West Leicestershire and Hinckley and Bosworth Districts;
- access deprivation – people with limited access to essential services, such as a Post Office, food shops, GP or primary school - in the most remote parts of all six Districts within the Forest; and,
- evidence of child poverty – children living in families that claim means tested benefits - in Burton upon Trent and parts of North West Leicestershire, South Derbyshire and Hinckley and Bosworth Districts.

1.3 Methodology

The basic approach and methodology developed for the main report is applicable to this Addendum. Consequently, the limitations that affected the main findings are also relevant.

In addition, no direct comparison of the IMD 2000 and ID 2004 is possible due to:

- new domains and indicators – the seven domains that constitute the Indices have each been revised and refocused, often drawing upon different data sources;
- new geographical units – the Indices is now based upon Standard Output Areas (SOAs) rather than wards; SOAs are a new standard unit introduced by the Office for National Statistics for presenting local statistical information, designed to overcome the variations in size and periodic boundary changes that affect wards; 'Lower Layer' SOAs are constrained by the ward boundaries used for the 2001 Census outputs; they will remain unchanged and are of a consistent size with a mean population of 1500; and,
- calculation based on the 2001 rather than the 1991 Census – denominators have been recalibrated following the 2001 Census, which also accommodated the significant ward boundary changes that have occurred since 1991 (the basis for the IMD 2000).

As a consequence, the Addendum will focus on trends and a broad comparison of the proportion of the population regarded as living in the Country's most deprived areas.

The Addendum employs the ward list and proportioning developed for the main report. Each of the wards has been converted to its constituent Lower Layer SOAs – typically each ward constitutes between one and five SOAs. Attached to this document are Figures 1 and 2 which are, respectively, maps of the wards and Lower Layer SOAs relating to The National Forest. A key to the ward and SOA codings is included within Table 4.

Where the estimated proportion of a ward population, as calculated for the main report, was found to be negligible - the data for the ward has been excluded. This reflects the fact that the Indices refers to deprivation as it affects individuals rather than geographical areas.

Following conversion of Forest area wards to SOAs, ID 2004 data was then collated and analysed to produce the following results.

1.4 Indices of Deprivation 2004

The ID 2004 highlights three SOAs in the Forest area - within the East Staffordshire wards of Winshill, Shobnall and Stapenhill - that are among the 10% most deprived in England (Table 2). A further eighteen SOAs fall within the 25% most deprived in the Country. Of the 21 SOAs, there are none in Charnwood, fifteen in East Staffordshire, none in Hinckley and Bosworth or Lichfield, three in North West Leicestershire and three in South Derbyshire District. This represents a broadly similar geographical pattern to that found under the IMD 2000. Attached to this document is Figure 3 which highlights the geographical distribution of the most deprived areas.

Table 2: Forest SOAs within the 10% and 25% most deprived in the Country (ID 2004 (revised))

| No | Lower Layer Super Output Area | Key to Figure 3 | Ward | District | ID 2004 Score | Rank out of 32,482 SOAs in England |
|--------------------------|-------------------------------|-----------------|--------------------------------|--------------|---------------|------------------------------------|

| 21 | E01029448 | 21 | Shobnall | East Staffs | 30.29 | 8023 |

NB. (part) only part of ward in The National Forest

Source: ODPM

As stated previously, SOAs are broadly standardised units with the Lower Layer SOAs having a mean population of 1500. It is therefore possible to estimate that the three SOAs amongst the 10% most deprived will equate to a population of 4500 – around 2% of the total Forest population under the ID 2004 (The total Forest population at the 2001 Census was 200,047). This compares with an estimate of 5% using the Index of Multiple Deprivation in 2000. Similarly, around 16% of the Forest's population reside in the Country's 25% most deprived SOAs under the ID 2004, compared with 26% using the Index of Multiple Deprivation 2000.

Whilst not totally robust, over the period 2000-2004 there has undoubtedly been a significant decline in the proportion of the Forest population residing in the Country's most deprived areas.

The introduction of the standard Lower Layer SOA unit enables an average ID 2004 score and ranking to be generated for the Forest area and compared with averages for the relevant Districts and Counties (Table 3). The average scores indicate that levels of deprivation are generally higher in the Forest area than in the individual Districts, with the exception of East Staffordshire. In terms of the Counties, the average Forest SOA score is above that for Leicestershire, marginally above Staffordshire and below Derbyshire.

Table 3: Average Scores and Ranks for Lower Layer SOAs (ID 2004 (revised))

| Area | Average ID 2004 Score | Average ID 2004 Rank |
|-------------------------------|-----------------------|----------------------|
| Charnwood | 12.14 | 9998 |
| East Staffordshire | 18.54 | 14,628 |
| Hinckley and Bosworth | 11.07 | 9280 |
| Lichfield | 12.01 | 10,138 |
| North West Leicestershire | 15.88 | 13,860 |
| South Derbyshire | 14.79 | 12,559 |
| National Forest wards* | 17.20 | 18,284 |
| Derbyshire | 19.67 | 15,960 |
| Leicestershire | 10.98 | 9010 |
| Staffordshire | 16.31 | 13,544 |

NB. *This includes part wards, except those with a negligible population in the Forest area

Source: ODPM

Table 4 provides a detailed breakdown of how the ID 2004 score for each SOA is composed. Examination of SOAs which ranked amongst the 7720 most deprived (equivalent to 2000 most deprived wards under the IMD 2000) reveals concentrations of deprivation as measured by the following domains:

- Income deprivation domain – proportion of the population experiencing income deprivation in an area – predominantly in Burton upon Trent.
- Employment deprivation domain – conceptualised as involuntary exclusion of the working age population from the world of work – predominantly in Burton upon Trent but also in South Derbyshire District.
- Health deprivation and disability domain – identified areas with relatively high rates of people who die prematurely or whose quality of life is impaired by poor health – in Burton upon Trent and South Derbyshire District.
- Education, skills and training deprivation domain – extent of education deprivation for children/young people and lack of skills/qualifications amongst the working age adult population – in Burton upon Trent and North West Leicestershire and South Derbyshire Districts.
- Barriers to housing and services domain – geographical barriers to key local services and wider barriers such as access to housing – to a limited extent across most Districts, though in this instance the outlying areas of East Staffordshire District rather than the town of Burton upon Trent.
- Crime domain – incidence of recorded crime for four major crime themes at a small area level – in Burton upon Trent and North West Leicestershire District.
- The living environment deprivation domain – a measure of the quality of housing, air quality and road traffic accidents – in Burton upon Trent only.

The new ID 2004 offers an enhanced tool for the analysis of deprivation – with data available at a lower level and using more recent and improved data sources. Whilst it is possible to conclude that the proportion of the Forest population living within the Country's most deprived areas has fallen, the introduction of standardised units means that in the future the Indices should provide an increasingly robust measure of change over time.

About the Centre

The Centre for Economic and Social Regeneration is a rapidly growing consultancy with a range of clients including regional development agencies, local authorities, regeneration partnerships and European organisations. The Centre is seeking to bring a new approach to regeneration consultancy, offering innovative solutions to the challenges faced by disadvantaged communities and changing local economies.

The Centre is a self-funded research and consultancy organisation based within Staffordshire University. It was established to enhance the University's role in regeneration and has successfully built a reputation for high quality work amongst the major agencies and organisations involved in local and regional regeneration, both in the West Midlands region and beyond.

The Centre has particularly specialised in evaluation, project and strategy development, baseline and performance measurement, securing external funding, the facilitation of policy and planning developments, partnership development and survey design and completion, in both urban and rural regeneration contexts. It also stages an annual programme of conferences and short courses aimed at regeneration practitioners.
